ABSTRACT

Topic:

Library Management System

Introduction:

A library management system is software that is designed to manage all the functions of a library. It helps librarian to maintain the database of new books and the books that are borrowed by members along with their due dates.

This system completely automates all your library's activities. The best way to maintain, organize and handle countless books systematically is to implement a library management system software.

Features:

- Simple And Easy to use
- Online and Offline Storage of Data
- Eliminate The need for Extensive Paperwork
- Eliminates the Need for Manual Entries

Conclusion:

An library Management system is software that helps in simplifying the daily operations of the library. The purpose of a library management system is to manage and track the daily work of the library such as issuing books, return books, due calculations, etc. This system completely automates all your library's activities.
